Idea of LIFE — New European Bauhaus

Sub-programme

Circular economy, waste resources, air, water, soil, noise, chemicals and Bauhaus (LIFE-2022-SAP-ENV-ENVIRONMENT).

Deadline for submission of projects

4 October 2022-17:00 CET

Information on the results of the evaluation

March 2023

Signing Subsidy Agreement

June/July 2023

Estimated start date

September 2023

Project duration

4 years

Funding rate

Standard Action Projects (SAP) — Maximum funding rate of 60 %.

Indicative range of project budgets

EUR 2-10 million

Estimated number of projects to be financed

38 projects (among all priorities)

Scope and priorities

The sub-theme is in line with the **New European Bauhaus (NEB) initiative**, an environmental, economic and cultural initiative to combine design, sustainability, accessibility and affordability in order to contribute to the achievement of the European Green Deal.

Priority will be given to the following proposals:

- Focused on a holistic reduction of the environmental impact of new buildings
- In circular districts involving the creation of circular value chains to boost urban economies while producing urban and territorial regeneration
- To maintain or restore biodiversity that contribute to the implementation of the New European Bauhaus initiative (e.g. by demonstrating biodiversity-friendly practices for the energy isolation of buildings, innovative architectural approaches to wildlife-friendly buildings...).

Objective

The project will aim to transform the neighbourhoods of different European cities following the approach of the new European Bauhaus. This urban transformation will pursue the generation of more sustainable and circular territories co-governed by the inhabitants and will include:

- Energy rehabilitation of key buildings in the neighborhood, in which the subsequent use of the building will be of great importance so that this project boosts the transformation of the neighborhood. Particular consideration will be given to issues such as accessibility, aesthetics, life-cycle analysis of materials, management of construction waste and the concept of urban mining.
- Encouraging the creation of energy communities.

EUROVERTICE

ESPECIALISTAS EN FINANCIACIÓN EUROPEA

- Integration of biodiversity in the urban fabric and in the renovation of buildings.
- Promoting circular economy and collaborative economy initiatives, while reinforcing community sentiment.

Possible actions

- Rehabilitation of a public building that has the potential to be used by different users: school, cultural center, library, building without current use, premises of associations...
- Constitution of energy communities.
- Use of unused or empty public spaces for the creation of green areas and the regeneration of existing green areas.
- Actions to promote urban biodiversity: live corks, nest boxes and drinking/feeders for birds, insect hotels, hedges for pollinators, interventions in buildings to promote the nesting of urban birds.
- Participatory processes for the promotion of co-governance: participatory workshops for the design of new spaces, Jane Jacobs walks, use of narrative approaches and “Storytelling”, application of design-thinking methodologies.
- Implementation of initiatives such as time banks, object exchange/library markets and object repair shops.

Contribution to European policies

- Renewal wave/Energy Efficiency Directive
- New Climate Change Adaptation Strategy.
- Circular Economy Action Plan.
- Strategy for Biodiversity 2030.
